

Dr. Strangecat
or:
How I Learned
to Stop
Worrying and
Love to Git

What is GitHub?

But really, it's all about that git

Where do my files live?

a Reduces barriers to collaboration

b Provides a form of back up

c Captures project evolution

d Experiment without fear

e Commit to transparency

Why am I doing this?

Your GitHub
repo

Your local
repo

Pull Request

a Create repo on Github

b Clone to repo to desktop

c [Work]

d Commit material/changes

**new
project**

Workflow

a Fork repo on Github from other user

b Clone to repo to desktop

c [Work]

d Commit material/changes to your fork

e Pull request with changes

**collab.
project**

Workflow

1. **Create a repository & add README (doomsday)**
2. **Clone to local machine**
3. **Add description to the README**
4. **Commit changes**
5. **Push/sync**
6. **Check GitHub**
7. **Create a new csv/txt file**
8. **Update gitignore to ignore csv/txt**
9. **Collaboration workflow - fork/clone/pull OR clone/branch/merge**
