

# q1 data element changes

nov 8

## boiled down changes

old disagg	new disagg (q1)	affected indicators
[modality]/aggregated age/sex/result	[modality]/age aggregated/sex/result	hts_tst
age/sex	age aggregated/sex	diagnosed_nat, tx_curr_nat, tx_curr_subnat, vl_suppression
age/sex aggregated	age aggregated/sex	care_curr, care_new
age/sex/knownnewposneg	age aggregated/sex/knownnewposneg	tb_stat
age/sex/service2017	age/sex/service	ovc_serv
age/sex[,] aggregated	age aggregated/sex	tx_curr, tx_new
age/sex2017	age/sex	gend_gbv, ovc_serv
age2017	age	pmtct_stat
aggregated age/sex	age aggregated/sex	pp_prev, tb_art, tb_prev, tb_screendx, tb_stat,
aggregated age/sex/indication	age aggregated/sex/indication	tx_pvl
aggregated age/sex/result	[modality]/age aggregated/sex/result	hts_tst
keypop2017	keypop	kp_prev
known/new/age2017	known/new/age	pmtct_stat
result	results	bs_screen, tb_stat

there was an effort made to streamline data element naming conventions which is set to release fy18q1. a few additional modifications were either overlooked or are now being suggested.

data element changes were provided by jess brown on nov 1  
via “upcoming changes to analytics in q1.xlsx”

bs\_screen and tb\_stat are having their disaggs changed from “result” to “results”. hts\_tst also has a data element containing “result.” should it also be changed to match the others?

## proposed change 2

	results	targets
1	HomeMod	HmMod
2	Index	Index
3	IndexMod	NdxMod
4	Inpat	Inpat
5	MobileMod	MbMod
6	OtherMod	OtrMod
7	OtherPITC	OtPITC
8	PMTCT ANC	PMTCTANC
9	TBClinic	TBC
10	VCT	VCT
11	VCTMod	VCTMod
12	VMMC	VMMC

for some reason many of the the target modalities were abbreviated and do not match results modality data elements in results. this makes working with the data more complicated, and "un-standarizes" them from the rest of the names.

hts modalities

if changes are being made to dissagg names, i propose changing the hts community modality dissagg from having "Mod" as the common stub to "Com" or "Comm" since "Mod" is not intuitive (and i would assume its short for modality which they all are subsets of).

community modalities stub

## proposed change 4

homemod/age aggregated/sex/result  
index/age aggregated/sex/result  
indexmod/age aggregated/sex/result  
inpat/age aggregated/sex/result  
mobilemod/age aggregated/sex/result  
othermod/age aggregated/sex/result  
otherpitc/age aggregated/sex/result  
pmtct anc/age aggregated/female/result  
tbclinic/age aggregated/sex/result  
vct/age aggregated/sex/result  
vctmod/age aggregated/sex/result  
vmmc/age aggregated/male/result

modality/age aggregated/sex/result

i know there are possible difficulties/issues around this request, but in the name of standardization i would suggest changing all the modalities from being listed in the disagg name and change it to just modality (as is the current case in the fact view).

grouping modalities
