

Dr. Strangecat or: How I Learned to Stop Worrying and Love to Git

What is GitHub?

But really, it's all about that git

Where do my files live?

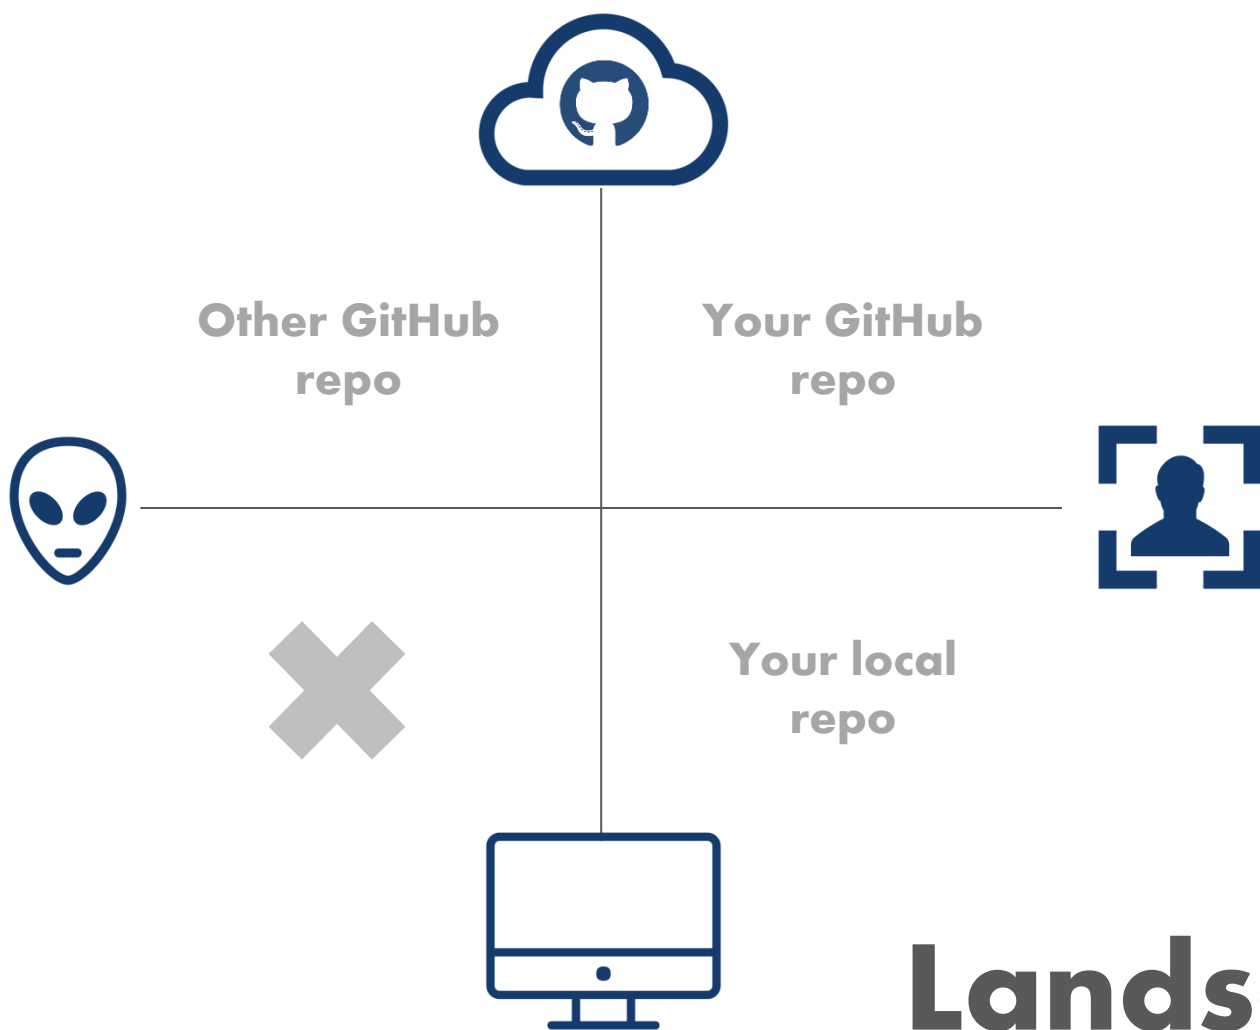

a Reduces barriers to collaboration

b Provides a form of back up

c Captures project evolution

d Experiment without fear

Why am I doing this?

Landscape

repository

Terminology

Commit

Terminology

pull

Terminology

fork

Terminology

clone

Terminology

pull request

Terminology

a Create repo on Github

b Clone to repo to desktop

c [Work]

d Commit material/changes

**new
project**

Workflow

a Fork repo on Github from other user

b Clone to repo to desktop

c [Work]

d Commit material/changes to your fork

e Pull request with changes

**collab.
project**

Workflow

1. **Create a repository & add README (test_repo)**
2. **Clone to local machine**
3. **Add description to the README**
4. **Commit changes**
5. **Push/sync**
6. **Check GitHub**
7. **Create a new csv/txt file**
8. **Update gitignore to ignore csv/txt**
9. **Collaboration workflow - fork/clone/pull OR clone/branch/merge**
